

Amplifier Built-in
Compact Photoelectric Sensor
CX-400 SERIES Ver.2

CX-400 SERIES Ver.2**Sensors that are environmentally and user friendly.****Reducing environmental burdens further
Up to 60% less power consumption**

The various lineup covers through the inclusion of a newly developed custom integrated circuit. The **CX-400** series achieves reductions in power consumption of up to 60%, averaging 44% reduction when upgrading due to its unique design. These sensors reduce carbon emissions and contribute to environmental friendliness.

Providing stable detection with low power consumption

Includes an analog CMOS processor ASIC

**Contributing to reduced carbon dioxide emissions**

Electricity consumed by the **CX-400** series has been reduced on average 10.5 mA. Calculating 8 hours/day, 260 days (operating 5 days/week) for a total of 2,080 hours/year leads to:

▶ The **CX-400** contributes

Approx. 84.6 t annually in carbon dioxide reductions to the world

Strong against oil and coolant liquids **CX-41□/42□/49□**

The lens material for the thru-beam type, retroreflective type (excluding the **CX-48□**) and the diffuse reflective type are made of a strong acrylic that resists the harmful effects of coolants. These sensors can be used with confidence even around metal processing machinery that disperses oil mists. The protection mechanism also conforms to IP67 (IEC).

Test Oil	JIS Standard	Product Name
Lubricant	-	Velocity Oil No. 3
Water-insoluble cutting oil	2-5	Daphnecut AS-30D
	2-11	Yushiron Oil No.2ac (Note)
Water-soluble cutting oil	W1-1	Yushiron Lubic HWC68 (Note)
	W2-1	Yushiroken S50N (Note)

1,000 hours; Immersion (depth 0 m); Insulation resistance 20 MΩ/250 V

Note: Yushiron and Yushiroken are registered trademarks of Yushiro Chemical Industry Co., Ltd.

Strong against ethanol**CX-44□/48□**

A strong, ethanol resistant polycarbonate was used for the front and display covers. Safe even for installing near food processing machinery that disperses ethanol based detergents. The protection mechanism also conforms to IP67 (IEC).

Caution: Set the **CX-48□** so that cleaning liquid will not get on to the attached reflector.

APPLICATIONS

Detecting out of position tape feeder cassette

Detecting objects in dusty environment

Passage confirmation of object on a conveyor belt

Detecting transparent glass bottles

Detecting a small tablet

Detecting a biscuit

BASIC PERFORMANCE

Strong infrared beam

CX-412/413

Remarkable penetrating power enables applications such as package content detection.

Note: When sensing utilizing penetrating power, make sure to verify using the actual sensor.

Can sense differences as small as 0.4 mm 0.016 in, with hysteresis of 2 % or less

CX-441/443

An advanced optical system provides sensing performance that is 2.5 times approx. than conventional models. Even ultra-small differences of 0.4 mm 0.016 in can be detected accurately.

2.5 times the sensing capability!

Height differences of as little as 0.4 mm 0.016 in can be detected at a setting distance of 20 mm 0.787 in

Hardly affected by colors

CX-441/443

Both black and white objects can be sensed at the same distances. No adjuster control is needed, even when products of different colors are moving along the production line.

30 % higher sensing capability

[The difference in sensing ranges is 1% or less between non-glossy white paper with a setting distance of 50 mm 1.969 in and non-glossy gray paper with a brightness level of 5.]

Retroreflective type with polarizing filters

CX-491

Built-in polarizing filters ensure stable sensing even on a specular object.

BASIC PERFORMANCE**Introducing the transparent object sensing type sensor****CX-48□**

Our unique optical system and transparent object sensing circuitry provide stable sensing of even thinner transparent objects than the conventional models.

Transparent objects detectable with **CX-48□** (Typical examples)

Sensing object	Sensing object size (mm in)
Glass sheet	50 × 50 1.969 × 1.969 t = 0.7 0.028
Cylindrical glass	ø50 ø1.969 ℓ = 50 1.969 t = 1.3 0.051
Acrylic board	50 × 50 1.969 × 1.969 t = 1.0 0.039
Styrol (Floppy case)	50 × 50 1.969 × 1.969 t = 0.9 0.035
Food wrapping film	50 × 50 1.969 × 1.969 t = 10 μm 0.394 mil
Cigarette case film	50 × 50 1.969 × 1.969 t = 20 μm 0.787 mil
Vinyl sack	50 × 50 1.969 × 1.969 t = 30 μm 1.181 mil
PET bottle (500ml)	ø66 ø2.598

Reflector setting range **CX-481**: 300 to 500 mm 11.811 to 19.685 in,
CX-482: 1 to 2 m 3.281 to 6.562 ft

[with the **RF-230** reflector at the optimum condition (Note)]

Each object should pass across the beam at the center between the sensor and the reflector.

ℓ: Length of cylindrical glasses

t: Thickness of sensing object

Note: The optimum condition is defined as the condition in which the sensitivity level is set such that the stability indicator just lights up when the object is absent.

Long sensing range of 5 m 16.4 ft **CX-493**

A long 5 m 16.4 ft sensing range is possible with the red LED type that is easy to align with the beam axis. Can be used for wide automatic door shutters.

**Ultra-long sensing range of 30 m 98.4 ft** **CX-413**

The **CX-413** achieves the ultra-long sensing range of 30 m 98.4 ft. It can be used for a stacker crane or a multilevel parking structure.

**ENVIRONMENTAL RESISTANCE****Strong on dust and dirt****CX-412/413**

Because the light source is an infrared light, it is strong on dust and dirt compared to the red beam type.

**Strong even in cold environments**

Stable performance can be maintained even in environments of -25 °C -13 °F.

Stronger noise resistance

The **CX-400** series has a higher noise resistance than its previous model. By incorporating an inverter countermeasure circuit that appropriately shifts with peak wavelength, the sensor now resists high-frequency noise from high-voltage inverter motors and inverter lights more effectively.

**ECO****Thoroughly eliminating unnecessary waste, Reducing many environmental burdens****ECO**

The **CX-400** series has three different cable length types and uses very simple packaging to reduce waste. The bag is made of polyethylene and does not emit toxic gasses.

MOUNTING

Beam axis alignment made easy with a high luminance spot beam **CX-423**

These sensors have a high luminance red LED spot beam which provides bright visibility enabling the sensing position to be checked at a glance. Because it achieved small beam spot approx. $\varnothing 2$ mm $\varnothing 0.079$ in at setting distance 100 mm 3.937 in, approx. $\varnothing 5$ mm $\varnothing 0.197$ in at setting distance 200 mm 7.874 in, even the minutest object can be accurately detected.

The bright spot makes beam axis alignment easy **CX-441**

These sensors have a high luminance red spot that provides bright visibility. The sensing position can be checked at a glance. Because the **CX-441** sensor has the smallest spot in its class $\varnothing 2$ mm $\varnothing 0.079$ in approx., even the minutest object can be accurately detected.

OPERABILITY

Reduction of volume adjustment labor **CX-423**

Because these sensors possess many variations depending on the sensing range, enables you to make optimal volume adjustment easily.

CX-422: 800 mm 31.496 in
CX-421: 300 mm 11.811 in
CX-424: 100 mm 3.937 in

Can be used for sensing minute differences **CX-441**

Equipped with a 5-turn adjuster so that even challenging range settings can be handled with ease.

VARIETIES

Basic type available

Omit the sensitivity adjuster and operation mode switch and release a basic type cable 0.5 m 1.641 ft in length. If the usage is clear, quick construction can be performed onsite without detailed adjustments and the cost can be controlled.

Less processing time

M8 plug-in connector type and M12 pigtailed type are available. This contributes to less time spent in setting up. In addition, cable types are available with cable lengths of 0.5 m 1.640 ft, 2 m 6.562 ft and 5 m 16.404 ft. This results in less wastage.

No unnecessary cables or terminal blocks

Select from 2 spot diameters as per the application **CX-441/443**

Within the choice of 50 mm 1.969 in sensing range sensors, we offer small spot approx. $\varnothing 2$ mm $\varnothing 0.079$ in type optimal for detecting minute object and large approx. $\varnothing 6.5$ mm $\varnothing 0.256$ in spot type capable of sensing object covered with holes and grooves.

FUNCTIONS

BGS/FGS functions make even the most challenging settings possible!

CX-44

The BGS function is best suited for the following case

Background not present

When object and background are separated

Not affected if the background color changes or someone passes behind the conveyor.

The FGS function is best suited for the following case

Background present

When object and background are close together
When the object is glossy or uneven

Unaffected by gloss, color or uneven surfaces when sensing objects present on a conveyor belt.

Caution: Please use the FGS function together with a conveyor or other background unit.

BGS (Background suppression) function

The sensor judges that an object is present when light is received at position A of the light-receiving element (2-segment element).

This is useful if the object and background are far apart. The distance adjustment method is the same as the conventional adjustment method for adjustable range reflective type sensors.

FGS (Foreground suppression) function

The sensor judges that an object is present when no light is received at position B of the light-receiving element (2-segment element). Accordingly, even objects that are glossy can be sensed. This is useful if the object and background are close together, or if the object being sensed is glossy.

Strong against interference

The interference prevention function lets two sensors to be mounted close together precisely.

ORDER GUIDE**Standard type**

Type	Appearance	Sensing range	Model No. (Note 1)		Output operation	Emitting element
			NPN output	PNP output		
Thru-beam Long sensing range		10 m 32.808 ft	CX-411	CX-411-P	Switchable either Light-ON or Dark-ON	Red LED
		15 m 49.213 ft	CX-412	CX-412-P		Infrared LED
		30 m 98.425 ft	CX-413	CX-413-P		Infrared LED
Retroreflective For transparent object sensing		3 m 9.843 ft (Note 2)	CX-491	CX-491-P		Red LED
		5 m 16.404 ft (Note 2)	CX-493	CX-493-P		Red LED
		50 to 500 mm 1.969 to 19.685 in (Note 2)	CX-481	CX-481-P		Infrared LED
		50 to 1,000mm 1.969 to 39.37 in (Note 2)	CX-483	CX-483-P		
Diffuse reflective Narrow-view		100 mm 3.937 in	CX-424	CX-424-P	Infrared LED	
		300 mm 11.811 in	CX-421	CX-421-P		
		800 mm 31.496 in	CX-422	CX-422-P		
Adjustable range reflective Small spot		70 to 300 mm 2.756 to 11.811 in	CX-423	CX-423-P	Switchable either Detection-ON or Detection-OFF	Red LED
		2 to 50 mm 0.079 to 1.969 in	CX-441	CX-441-P		Red LED
		15 to 100 mm 0.591 to 3.937 in	CX-444	CX-444-P		
		20 to 300 mm 0.787 to 11.811 in	CX-442	CX-442-P		

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets.

Notes: 1) The model No. with "E" shown on the label affixed to the thru-beam type sensor is the emitter, "D" shown on the label is the receiver.

2) The sensing range of the retroreflective type sensor is specified for the RF-230 (optional) reflector. The sensing range represents the actual sensing range of the sensor. The sensing ranges itemized in "A" of the table below may vary depending on the shape of sensing object. Be sure to check the operation with the actual sensing object.

	CX-491 □	CX-493 □	CX-481 □	CX-483 □	CX-482 □
A	0 to 3 m 0 to 9.843 ft	0 to 5 m 0 to 16.404 ft	50 to 500 mm 1.969 to 19.685 in	50 to 1,000 mm 1.969 to 39.37 in	0.1 to 2 m 0.328 to 6.562 ft
B	0.1 to 3 m 0.328 to 9.843 ft	0.1 to 5 m 0.328 to 16.404 ft	100 to 500 mm 3.937 to 19.685 in	100 to 1,000 mm 3.937 to 39.37 in	0.8 to 2 m 2.625 to 6.562 ft

ORDER GUIDE

Basic type (Without operation mode switch and sensitivity adjuster. Cable is 0.5 m 1.640 ft long.)

Type	Appearance	Sensing range	Model No.(Note 1)		Output operation	Emitting element
			NPN output	PNP output		
Thru-beam Long sensing range		 10 m 32.808 ft	CX-411A-C05	CX-411A-P-C05	Light-ON	Red LED
			CX-411B-C05	CX-411B-P-C05	Dark-ON

			CX-491B-C05-Y	CX-491B-P-C05-Y	Dark-ON	

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets.

- Notes: 1) The model No. with "E" shown on the label affixed to the thru-beam type sensor is the emitter, "D" shown on the label is the receiver.
 2) The reflector is an option. The sensing range of the reflector is specified for the **RF-230**.
 3) The sensing range of the retroreflective type sensor is specified for the **RF-230** (optional) reflector (p.10). The sensing range represents the actual sensing range of the sensor. The sensing range : A of the table below may vary depending on the shape of sensing object. Be sure to check the operation with the actual sensing object.

ORDER GUIDE

0.5 m 1.640 ft / 5 m 16.404 ft cable length types

0.5 m 1.640 ft / 5 m 16.404 ft cable length types (standard: 2 m 6.562 ft, basic: 0.5 m 1.640 ft) are also available.

When ordering this type, suffix “-C05” for the 0.5 m 1.640 ft cable length type, “-C5” for the 5 m 16.404 ft cable length type to the model No. (Excluding CX-44□ and basic type)

(e.g.) 0.5 m 1.640 ft cable length type of CX-411-P is “CX-411-P-C05”

5 m 16.404 ft cable length type of CX-411-P is “CX-411-P-C5”

M8 plug-in connector type, M12 pigtailed type

M8 plug-in connector type and M12 pigtailed type are also available.

When ordering this type, suffix “-Z” for the M8 connector type, “-J” for the M12 pigtailed type to the model No.

(Please note that M12 pigtailed type is not available for CX-44□. Excluding basic type)

(e.g.) M8 connector type of CX-411-P is “CX-411-P-Z”

M12 pigtailed type of CX-411-P is “CX-411-P-J”

- Mating cable (2 cables are required for the thru-beam type.)

Type		Model No.	Cable length	Description
For M8 plug-in connector type	Straight	CN-24A-C2	2 m 6.562 ft	Can be used with all models
		CN-24A-C5	5 m 16.404 ft	
	Elbow	CN-24AL-C2	2 m 6.562 ft	
		CN-24AL-C5	5 m 16.404 ft	
For M12 pigtailed type	2-core	CN-22-C2	2 m 6.562 ft	For thru-beam type emitter (2-core)
		CN-22-C5	5 m 16.404 ft	
	4-core	CN-24-C2	2 m 6.562 ft	Can be used with all models
		CN-24-C5	5 m 16.404 ft

RF-230 (Note 3)	CX-491□-Y□	3 m 9.843 ft (Note 2)	ø50 mm ø1.969 in

Notes: 1) Value when attached on both sides.
 2) Set the distance between the CX-491□/493□ and the reflector to 0.1 m 0.328 ft or more. However, see the table below for CX-48□.
 The sensing range "A" may vary depending on the shape of sensing object. Be sure to check the operation with the actual sensing object.

Round slit mask

- OS-CX-□
Fitted on the front face of the sensor with one-touch.

Rectangular slit mask

- OS-CX-□×6
Fitted on the front face of the sensor with one-touch.

Interference prevention filter

- PF-CX4-V (Vertical, Silver)
- PF-CX4-H (Horizontal, Light brown)
Two sets of CX-411□ can be mounted close together.

Model No.	Sensor		A	B
	Sensor	Reflector		
CX-481□	RF-220	50 to 300 mm 1.969 to 11.811 in	100 to 300 mm 3.937 to 11.811 in	
	RF-220	0.1 to 0.7 m 0.328 to 2.297 ft	0.2 to 0.7 m 0.656 to 2.297 ft	
CX-483□	RF-210	0.1 to 0.3 m 0.328 to 0.984 ft	0.1 to 0.3 m 0.328 to 0.984 ft	
	RF-230	0.05 to 1 m 0.164 to 3.281 ft	0.1 to 1 m 0.328 to 3.281 ft	
CX-482□	RF-220	0.1 to 1.3 m 0.328 to 4.265 ft	0.5 to 1.3 m 1.640 to 4.265 ft	
	RF-210	0.1 to 0.6 m 0.328 to 1.969 ft	0.3 to 0.6 m 0.984 to 1.969 ft	

3) RF-230 is attached to the retroreflective type sensor other than the basic type.

Reflector

OPTIONS

Designation	Model No.	Description
Reflector mounting bracket	MS-RF21-1	Protective mounting bracket for RF-210 It protects the reflector from damage and maintains alignment.
	MS-RF22	For RF-220
	MS-RF23	For RF-230
Reflective tape	RF-11	<ul style="list-style-type: none"> Sensing range (Note 2): 0.5 m 1.640 ft [CX-491] 0.8 m 2.625 ft [CX-493] Ambient temperature: -25 to +50 °C -13 to +122 °F Ambient humidity: 35 to 85 % RH Notes: 1) Keep the tape free from stress. If it is pressed too much, its capability may deteriorate. 2) Do not cut the tape. It will deteriorate the sensing performance.
	RF-12	<ul style="list-style-type: none"> Sensing range (Note 2): 0.7 m 2.297 ft [CX-491] 1.2 m 3.937 ft [CX-493] 0.1 to 0.6 m 0.328 to 1.969 ft [CX-482]
	RF-13	<ul style="list-style-type: none"> Sensing range (Note 3): 0.5 m 1.640 ft [CX-491] Ambient temperature: -25 to +55 °C -13 to +131 °F Ambient humidity: 35 to 85 % RH
Sensor mounting bracket (Note 1)	MS-CX2-1	Foot angled mounting bracket It can also be used for mounting RF-210 .
	MS-CX2-2	Foot biangled mounting bracket It can also be used for mounting RF-210 .
	MS-CX2-4	Protective mounting bracket
	MS-CX2-5	Back biangled mounting bracket
	MS-CX-3	Back angled mounting bracket
Universal sensor mounting stand	MS-AJ1	Horizontal mounting type
	MS-AJ2	Vertical mounting type
	MS-AJ1-A	Horizontal mounting type
	MS-AJ2-A	Vertical mounting type
	MS-AJ1-M	Horizontal mounting type
Sensor checker	CHX-SC2	It is useful for beam alignment of thru-beam type sensors. The optimum receiver position is given by indicators, as well as an audio signal.

Notes: 1) The plug-in connector type sensor does not allow use of some sensor mounting brackets because of the protrusion of the connector.
 2) Set the distance between the sensor and the reflective tape to 0.1 m **0.328 ft** (CX-482) 0.4 m **1.312 ft** or more.
 3) Set the distance between the sensor and the reflective tape to 0.2 m **0.656 ft** or more.

Universal sensor mounting stand

• MS-AJ1

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Elevation angle: ±45°
 Mounting hole for M6 screw

• MS-AJ1-A

With the lateral arm, the sensor can sense from above a production line.
 Forward / back adjustment: 130 mm **5.118 in** approx.

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Angle adjustment: ±45°
 Mounting hole for M6 screw

• MS-AJ1-M

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Elevation angle: ±45°
 Mounting hole for M6 screw

• MS-AJ2

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Elevation angle: ±45°
 Mounting hole for M6 screw

• MS-AJ2-A

With the lateral arm, the sensor can sense from above a production line.
 Forward / back adjustment: 130 mm **5.118 in** approx.

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Angle adjustment: ±45°
 Mounting hole for M6 screw

• MS-AJ2-M

Swivel: 360° rotation
 Height adjustment: 150 mm **5.906 in** approx.
 Elevation angle: ±45°
 Mounting hole for M6 screw

Reflector mounting bracket

• MS-RF21-1

Two M3 (length 12 mm **0.472 in**) screws with washers are attached.

• MS-RF22

Two M3 (length 8 mm **0.315 in**) screws with washers are attached.

• MS-RF23

Two M4 (length 10 mm **0.394 in**) screws with washers are attached.

Reflective tape

• RF-11

30 mm **1.181 in**
 8 mm **0.315 in**
 0.7 mm **0.028 in**

• RF-12

30 mm **1.181 in**
 25 mm **0.984 in**

Cable			0.2 mm ² 3-core (thru-beam type emitter: 2-core) cabtyre cable, 2 m 6.562 ft long											
Cable extension			Extension up to total 100 m 328.084 ft is possible with 0.3 mm ² , or more, cable (thru-beam type: both emitter and receiver)											
Weight			Net			Emitter: 45 g approx., Receiver: 50 g approx.			50 g approx.			60 g approx.		
			Gross			100 g approx.			80 g approx.			60 g approx.		
Accessories			RF-230 (Reflector): 1 pc.											

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C +73.4 °F.
 2) The sensing range and the sensing object of the retroreflective type sensor are specified for the RF-230 reflector. The sensing range represents the actual sensing range of the sensor. The sensing range : A of the table below may vary depending on the shape of sensing object. Be sure to check the operation with the actual sensing object.

	CX-491□	CX-493□	CX-481□	CX-483□	CX-482□
A	0 to 3 m 0 to 9.843 ft	0 to 5 m 0 to 16.404 ft	50 to 500 mm 1.969 to 19.685 in	50 to 1,000 mm 1.969 to 39.37 in	0.1 to 2 m 0.328 to 6.562 ft
B	0.1 to 3 m 0.328 to 9.843 ft	0.1 to 5 m 0.328 to 16.404 ft	100 to 500 mm 3.937 to 19.685 in	100 to 1,000 mm 3.937 to 39.37 in	0.8 to 2 m 2.625 to 6.562 ft

- 3) The sensing range and hysteresis of the diffuse reflective type sensor are specified for white non-glossy paper (200 × 200 mm 7.874 × 7.874 in) as the object.
 4) If slit masks (optional) are fitted, an object of ø0.5 mm ø0.020 in (using round slit mask) can be detected.
 5) Make sure to confirm detection with an actual sensor before use.

Sensing field

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 100 mm 3.937 in.)

PRECAUTIONS FOR PROPER USE

All models

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

- The tightening torque should be 0.5 N·m or less.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.

CX-41 □ CX-42 □ CX-49 □ CX-48 □

Part description and functions

- Notes: 1) Not incorporated on the emitter.
2) It is the power indicator (green, lights up when the power is ON.) on the emitter.

Operation mode switch

Operation mode switch	Description
	Light-ON mode is obtained when the operation mode switch (thru-beam type incorporate it in the receiver) is turned fully clockwise (L side).
	Dark-ON mode is obtained when the operation mode switch (thru-beam type incorporate it in the receiver) is turned fully counter-clockwise (D side).

Beam alignment

Thru-beam type

1. Set the operation mode switch to the Light-ON mode position (L side).
2. Place the emitter and the receiver face to face along a straight line, move the emitter in the up, down, left and right directions, in order to determine the range of the light received condition with the help of the operation indicator (orange). Then, set the emitter at the center of this range.
3. Similarly, adjust for up, down, left and right angular movement of the emitter.
4. Further, perform the angular adjustment for the receiver also.
5. Check that the stability indicator (green) lights up.
6. Choose the operation mode, Light-ON or Dark-ON, as per your requirement, with the operation mode switch.

Retroreflective type

1. Set the operation mode switch to the Light-ON mode position (L side).
2. Placing the sensor and the reflector face to face along a straight line, move the reflector in the up, down, left and right directions, in order to determine the range of the light received condition with the help of the operation indicator (orange). Then, set the reflector at the center of this range.
3. Similarly, adjust for up, down, left and right angular movement of the reflector.
4. Further, perform the angular adjustment for the sensor also.
5. Check that the stability indicator (green) lights up.
6. Choose the operation mode, Light-ON or Dark-ON, as per your requirement, with the operation mode switch.

PRECAUTIONS FOR PROPER USE

CX-41□ CX-42□ CX-49□ CX-48□

Sensitivity adjustment

Step	Sensitivity adjuster	Description
①		Turn the sensitivity adjuster fully counterclockwise to the minimum sensitivity position, MIN.
②		In the light received condition, turn the sensitivity adjuster slowly clockwise and confirm the point A where the sensor enters the "Light" state operation.
③		In the dark condition, turn the sensitivity adjuster further clockwise until the sensor enters the "Light" state operation and then bring it back to confirm point B where the sensor just returns to the "Dark" state operation. (If the sensor does not enter the "Light" state operation even when the sensitivity adjuster is turned fully clockwise, the position is point B.)
④		The position at the middle of points A and B is the optimum sensing position.

Note: Use the flathead screwdriver (purchase separately) to turn the adjuster slowly. Turning with excessive strength will cause damage to the adjuster.

●	●	OFF	Unstable dark receiving	ON	●	●
●	●	OFF	Stable dark receiving	ON	●	●

●, ●: Lights up, ●: Turns OFF

Retroreflective type sensor (excluding CX-491□)

- Please take care of the following points when detecting materials having a gloss.

- ① Make L, shown in the diagram, sufficiently long.
- ② Install at an angle of 10 to 30 degrees to the sensing object.

Retroreflective type sensor with polarizing filters (CX-491□)

- If a shiny object is covered or wrapped with a transparent film, such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it. In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (specular) label or wrapping paper

Steps

- Tilt the sensor with respect to the sensing object while fitting.
- Reduce the sensitivity.
- Increase the distance between the sensor and the sensing object.

CX-48□

Retroreflective type sensor for transparent object sensing (CX-48□)

- Optimum sensing is possible when the position of the transparent sensing object is set at the center of the sensor and the reflector. If the sensing position is set near the sensor or the reflector, the sensing may be unstable. In this case, set the sensing position at the center of the sensor and the reflector.

- When the sensor detects an uneven plastic receptacle or glass bottle, the received-light amount may differ with the sensing position or direction. Adjust the sensitivity after confirming the stable sensing condition by turning the sensing object, etc.
- When sensing pipe-shaped transparent sensing object, set it in a standing, not lying, position as shown in Figure A. The sensor may fail to detect a lying object as shown in Figure B.

Correct

Incorrect

PRECAUTIONS FOR PROPER USE

CX-41□

Slit mask (Optional)

- With the slit mask **OS-CX-□**, the sensor can detect a small object.
However, the sensing range is reduced when the slit mask is mounted.

How to mount

1. Insert the fixing hook into the fixing groove.
2. Then, pressing the slit mask against the main unit, insert the fixing tab into the fixing groove.

How to remove

1. Insert a screwdriver into the removing tab.
2. Pull forward while lifting the removing tab.

Interference prevention filter (CX-411□)

- By mounting the interference prevention filters **PF-CX4-□**, two sets of the **CX-411□** can be mounted close together. However, the sensing range is reduced when the interference prevention filter is mounted.
- The filters can be mounted by the same method as for the slit masks.
- Since there are two types of the interference prevention filter, the two sets of sensors should be fitted with different types of interference prevention filters, as shown in the figure below.
The interference prevention does not work even if the filters are mounted for emitters only, receivers only or the same model No. of the interference prevention filters are mounted on both the sets of the sensor.

CX-44□

Mounting

- Care must be taken regarding the sensor mounting direction with respect to the object's direction of movement.

- When detecting a specular object (aluminum or copper foil, etc.) or an object having a glossy surface or coating, please take care that there are cases when the object may not be detected due to a change in angle, wrinkles on the object surface, etc.
- When a specular body is present below the sensor, use the sensor by tilting it slightly upwards to avoid wrong operation.

- If a specular body is present in the background, wrong operation may be caused due to a small change in the angle of the background body. In that case, install the sensor at an inclination and confirm the operation with the actual sensing object.
- Take care that there is a non-detectable area right in front of the sensor.

Operation mode switch

Operation mode switch	Description
	Detecting-ON mode is obtained when the operation mode switch is turned fully clockwise (L side).
	Not detecting-ON is obtained when the operation mode switch is turned fully counterclockwise (D side)

Note: Use the flathead screwdriver (purchase separately) to turn the operation mode switch slowly. Turning with excessive strength will cause damage to the adjuster.

- Depending on whether you select the BGS or FGS function, the output operation changes as follows.

PRECAUTIONS FOR PROPER USE

CX-44□

Stability indicator

- Since the **CX-44□** use a 2-segment photodiode as its receiving element, and sensing is done based on the difference in the incident beam angle of the reflected beam from the sensing object, the output and the operation indicator (orange) operate according to the object distance. Further, the stability indicator (green) shows the margin to the setting distance.

BGS/FGS functions

- This sensor incorporates BGS/FGS functions. Select either BGS or FGS function depending on the positions of the background and sensing object.

BGS function

- This function is used when the sensing object is apart from the background.

FGS function

- This function is used when the sensing object contacts the background or the sensing object is glossy, etc.
- Please use the FGS function together with a conveyor or other background unit.

Distance adjustment

- When this product is used, be sure to carry out the distance adjustment.
- Since the distance adjuster of this sensor is a 5-turn adjuster, when the point (A) and (B) is adjusted as explained in the table right, there may be more than 1 turn between the point (A) and (B). Therefore, make sure to remember the turns of both points to find the optimum position.
- Be sure to wire the sensing mode selection input (Pink / 2) before distance adjustment. If the wiring is done after the distance adjustment, the sensing area is changed.

- Turn the distance adjuster gradually and lightly with a "minus" screwdriver (purchase separately). In order to protect itself, the distance adjuster idles if turned fully. If the adjuster is idled when distance adjustment is done, carry out the adjustment again.

When using the BGS function

<When a sensing object is moving right or left to the sensor>

Step	Description	Distance adjuster
①	Turn the distance adjuster fully counterclockwise to the minimum sensing range position. (CX-441□/443□/444□ : 20 mm 0.787 in approx., CX-442□ : 40 mm 1.575 in approx.)	Turn fully
②	Place an object at the required distance from the sensor, turn the distance adjuster gradually clockwise, and find out point (A) where the sensor changes to the detecting condition.	
③	Remove the object, turn the adjuster clockwise further until the sensor goes into the detecting state again. Once it has entered, turn the distance adjuster backward until the sensor returns to the non-detecting condition. This position is designated as point (B). When the sensor does not go into the detecting condition even if the adjuster is turned fully clockwise, the position where the adjuster was fully turned is regarded as the point (B). (There may be more than 1 turn between point (A) and (B), since this sensor incorporates a 5-turn adjuster.)	
④	The optimum position to stably detect objects is the center point between (A) and (B).	

<When a sensing object is approaching / moving away from the sensor>

- Follow only steps ① and ②. Since the sensing point may change depending on the sensing object, be sure to check the operation with the actual sensing object.

When using the FGS function

- Please use the FGS function together with a conveyor or other background unit.

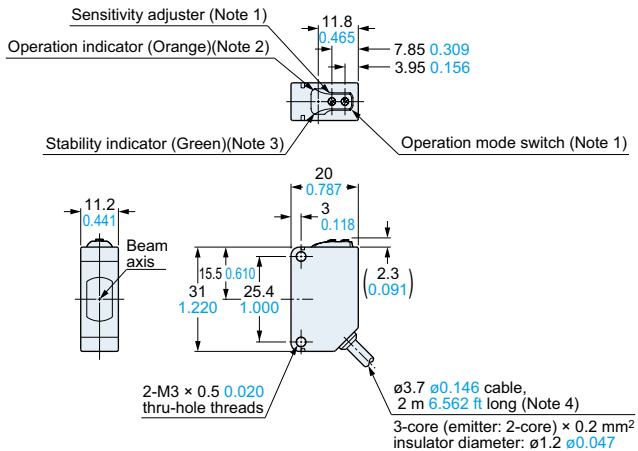

Step	Description	Distance adjuster
①	Turn the distance adjuster fully clockwise to the maximum sensing range position. (CX-441□/443□ : 50 mm 1.969 in approx., CX-444□ : 100 mm 3.937 in approx., CX-442□ : 300 mm 11.811 in approx.)	Turn fully
②	In the state where the sensor detects the background, turn the distance adjuster gradually counterclockwise, and find out point (A) where the sensor changes to the non-detecting condition.	
③	Place an object at the required distance from the sensor, turn the adjuster counterclockwise further until the sensor goes into the non-detecting condition again. Once entered, turn the distance adjuster backward until the sensor returns to the detecting condition. This position is designated as point (B). When the sensor does not go into the non-detecting condition even if the adjuster is turned fully counterclockwise, the position where the adjuster was fully turned is regarded as the point (B). (There may be more than 1 turn between point (A) and (B), since this sensor incorporates a 5-turn adjuster.)	
④	The optimum position to stably detect objects is the center point between (A) and (B).	

Others

- Its distance adjuster is mechanically operated. Do not drop; avoid other shocks.
